

Milk Maid makes the milk move

Calves in individual pens or igloos need milk 3 times a day. Milk Maid is a wagon designed to prepare the milk for a powder and move it to the calf area.

The wagon has big wheels for easy maneuvering. It is 60 cm wide only and goes through narrow doors easily. The mixer propell is designed for fast and efficient mixing of the powder (electric motor 230 VAC). Milk Maid has a special design milk pump which is run by a standard battery driven drilling machine.
